Project Description	Technology has vastly changed the landscape of how government business can be accomplished. During the COVID-pandemic, the remote conferencing opportunity with inmates from both the Downtown Detention Facility and the Jail Annex became instrumental in processing inmates without endangering staff, inmates, or other persons by transporting detainees to the downtown area. Through this, many courts have found videoconferencing to be fast and efficient, and the consensus is that many proceedings can continue to be held remotely between courthouse and these facilities. By creating a new courtroom at the Jail Annex with remote access capability, the proper facility to support these functions can be constructed without hindering the current operations at the facility. This new courtroom will be located adjacent to the current facility while maintaining the appropriate required secure perimeter.
